*Allowable Subject Matter*

1. Claims 34-137 are allowed.
2. The following is an examiner's statement of reasons for allowance: Tabe (US Pat. 6,762,686 B1) discloses a system that detects smoke 2 within a home, after the smoke has been detected, the area will be monitored to clear any person who may still be inside the home 5. After a PIR 15 determines that a person is within the home 5, the PIR will then activate a reporter 50 to dial the proper authorities 35 (col. 7, lines 52-63; col. 8, lines 61-67; col. 9, lines 1-14). Addy (US Pat. 6,028,513) discloses a system including a central transmitter 16 for transmitting an alarm signal to 22 or 24 that can be adapted to be worn by persons requiring specialized attention (col. 4, lines 37-67; col. 6, lines 57-66). A controller 11 for processing signals received by the alarm sensors 34 and then activates a siren 18 (first communication) as well as broadcasting a signal via central transmitter 16 that will send a signal to alarm devices 22 or 24 (second communication) (col. 5, lines 44-67; col. 6, lines 57-67). Bevan (US Pat. 6,661,345 B1) discloses an alertness monitoring system including sensors 11, 13 and 14 to detect the attentiveness of a driver that will determine whether the driver is capable of driving (col. 4, lines 44-67; col. 5, lines 1-28). Upon determining that the driver isn't alert, a first stage alarm may be triggered and stimulus control 220 will give a signal to the subject upon determining that a threshold has exceeded with one of the sensor(s) such as providing an audio sound, and the system continues to monitor the subject with sensor(s) and if increased activity, such as the subject turns his/her head to view the stimulus, then the system will reset the first stage alert trigger (col. 7, lines 43-67). However, none of these references nor any of the prior art of record disclose the claimed alarm system for use with a structure (building, etc.) comprising a safety

detector to detect a safety condition with respect to the structure (such as smoke); a transmitter to transmit a communication to a person in a form perceivable by the person and a processor functionally connected to the safety detector and the transmitter, and, in response to the safety detector detecting the safety condition, to cause the transmitter to transmit the communication in a first voice to the person in the form perceivable by the person and then to transmit the communication in a second voice to the person in the form perceivable by the person.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
